# 1. NodeApplication

describe class NodeApplication here

#### 1.1. ctorCallback

Name	NodeApplication::ctorCallback(args:	FunctionCallbackInfo <value>)</value>
Visibility		
Parameters	$args:\ Function Callback Info < Value>$	
Return value	none	
behavior	describe beahviour	

#### 1.2. staticCtorCallback

Name	<pre>NodeApplication::staticCtorCallback(args: FunctionCallbackInfo<value>)</value></pre>
Visibility	
Parameters	$args:\ Function Callback Info < Value>$
Return value	none
behavior	describe beahviour

#### 1.3. memberGetterCallback

Name	<pre>NodeApplication::memberGetterCallback(property: Local<string>, info: PropertyCallbackInfo<value>)</value></string></pre>
Visibility	
Parameters	$property:\ Local < String >,\ info:\ Property Callback Info < Value >$
Return value	none
behavior	describe beahviour

#### 1.4. memberSetterCallback

Name	<pre>NodeApplication::memberSetterCallback(property: Local<string>, value: Local<value>, info: PropertyCallbackInfo<value>)</value></value></string></pre>
Visibility	
Parameters	$property: \ Local < String >, \ value: \ Local < Value >, \ info: \ Property Callback-Info < Value >$
Return value	none
behavior	describe beahviour

#### 1.5. memberFunctionCallback

Name	NodeApplication::memberFunctionCallback(args:FunctionCallbackInfo <value>)</value>
Visibility	
Parameters	$args:\ Function Callback Info < Value>$
Return value	none
behavior	describe beahviour

## $1.6.\ static Getter Callback$

Name	<pre>NodeApplication::staticGetterCallback(property: Local<string>, info: PropertyCallbackInfo<value>)</value></string></pre>
Visibility	
Parameters	$property:\ Local < String >,\ info:\ Property Callback Info < Value >$
Return value	none
behavior	describe beahviour

#### 1.7. staticSetterCallback

Name	<pre>NodeApplication::staticSetterCallback(property: Local<string>, value: Local<value>, info: PropertyCallbackInfo<value>)</value></value></string></pre>
Visibility	
Parameters	$property: \ Local < String>, \ value: \ Local < Value>, \ info: \ Property Callback-Info < Value>$
Return value	none
behavior	describe beahviour

#### 1.8. staticFunctionCallback

Name	NodeApplication::staticFunctionCallback(args:FunctionCallbackInfo <value>)</value>
Visibility	
Parameters	$args:\ Function Callback Info < Value>$
Return value	none
behavior	describe beahviour

#### 1.9. Initialize

Name	NodeApplication::Initialize(exports: Local <object>, module: Local<object>)</object></object>
Visibility	
Parameters	$exports:\ Local < Object>,\ module:\ Local < Object>$
Return value	none
behavior	describe beahviour

#### 1.10. Instance

Name	NodeApplication::Instance()
Visibility	
Parameters	none
Return value	NodeApplication describe return value
behavior	describe beahviour

## 1.11. getIsolate

Name	NodeApplication::getIsolate()
Visibility	
Parameters	none
Return value	Isolate* describe return value
behavior	describe beahviour

## 1.12. getExports

Name	NodeApplication::getExports()
Visibility	
Parameters	none
Return value	Local <object> describe return value</object>
behavior	describe beahviour

## $1.13. \ {\tt getTemplateFactory}$

Name	NodeApplication::getTemplateFactory()
Visibility	
Parameters	none
Return value	TemplateFactory describe return value
behavior	describe beahviour

## $1.14. \ {\bf getFunctionFactory}$

Name	NodeApplication::getFunctionFactory()
Visibility	
Parameters	none
Return value	ProxyFunctionFactory describe return value
behavior	describe beahviour

## 1.15. getObjectFactory

Name	NodeApplication::getObjectFactory()
Visibility	
Parameters	none
Return value	ProxyObjectFactory describe return value
behavior	describe beahviour

## 2. TemplateFactory

describe class TemplateFactory here

## 2.1. createTemplate

Name	TemplateFactory::createTemplate(clazz: TClassRef)
Visibility	
Parameters	clazz: TClassRef
Return value	Local <functiontemplate> describe return value</functiontemplate>
behavior	describe beahviour

# ${\bf 3.}\ {\bf Template Cache}$

describe class TemplateCache here

#### 3.1. contains

Name	TemplateCache::contains(type: TClassRef)
Visibility	
Parameters	type: TClassRef
Return value	bool describe return value
behavior	describe beahviour

#### 3.2. get

Name	TemplateCache::get(type: TClassRef)
Visibility	
Parameters	type: TClassRef
Return value	Local <functiontemplate> describe return value</functiontemplate>
behavior	describe beahviour

#### **3.3.** store

Name	<pre>TemplateCache::store(type: TClassRef, tpl: Local<functiontemplate>)</functiontemplate></pre>
Visibility	
Parameters	$type:\ TClassRef,\ tpl:\ Local{<} FunctionTemplate{>}$
Return value	none
behavior	describe beahviour

# 4. ProxyFunctionFactory

describe class ProxyFunctionFactory here

## 4.1. createProxyFunction

Name	ProxyFunctionFactory::createProxyFunction(info: TMethod)
Visibility	
Parameters	info: TMethod
Return value	ProxyFunciton describe return value
behavior	describe beahviour

## 4.2. from Args

Name	ProxyFunctionFactory::fromArgs(name: string, clazz: TClassRef, args: FunctionCallbackInfo)
Visibility	
Parameters	$name:\ string,\ clazz:\ TClassRef,\ args:\ FunctionCallbackInfo$
Return value	ProxyFunction describe return value
behavior	describe beahviour

# 5. ProxyFunction

describe class ProxyFunction here

## 5.1. ProxyFunction

Name	ProxyFunction::ProxyFunction(address: void*, info: T	Function)
Visibility		
Parameters	address: void*, info: TFunction	
Return value	«constructor» describe return value	
behavior	describe beahviour	

#### 5.2. convertArgs

Name	ProxyFunction::convertArgs(args: FunctionCallbackInfo)
Visibility	
Parameters	$args:\ Function Callback Info$
Return value	ProxyObject[] describe return value
behavior	describe beahviour

#### 5.3. call

Name	ProxyFunction::call(args: ProxyObject[])
Visibility	
Parameters	args: ProxyObject[]
Return value	ProxyObject describe return value
behavior	describe beahviour

## 5.4. isTemplateFunction

Name	ProxyFunction::isTemplateFunction()
Visibility	
Parameters	none
Return value	bool describe return value
behavior	describe beahviour

# 6. ProxyObjectFactory

describe class ProxyObjectFactory here

## 6.1. createProxyObject

Name	ProxyObjectFactory::createProxyObject(type:ProxyObject)	TDataMember, holder:
Visibility		
Parameters	type: TDataMember, holder: ProxyObject	
Return value	ProxyObject describe return value	
behavior	describe beahviour	

# 7. ProxyObject

describe class ProxyObject here

## 7.1. ProxyObject

Name	ProxyObject::ProxyObject(address:	void*, type:	TDataMember)
Visibility			
Parameters	address: void*, type: TDataMember		
Return value	«constructor» describe return value		
behavior	describe beahviour		

## $7.2. \ getAddress$

Name	ProxyObject::getAddress()
Visibility	
Parameters	none
Return value	void* describe return value
behavior	describe beahviour

## 7.3. getType

Name	ProxyObject::getType()
Visibility	
Parameters	none
Return value	TDataMember describe return value
behavior	describe beahviour

#### 7.4. set

Name	ProxyObject::set(value: ProxyObject)
Visibility	
Parameters	value: ProxyObject
Return value	none
behavior	describe beahviour

## 7.5. get

Name	ProxyObject::get()
Visibility	
Parameters	none
Return value	Local <value> describe return value</value>
behavior	describe beahviour

#### 7.6. isPrimitive

Name	ProxyObject::isPrimitive()
Visibility	
Parameters	none
Return value	bool describe return value
behavior	describe beahviour

# 8. FunctionHelper

describe class FunctionHelper here

#### 8.1. GetCallFunc

Name	FunctionHelper::GetCallFunc(method: TCppMethod)
Visibility	
Parameters	method: TCppMethod
Return value	CallFunc* describe return value
behavior	describe beahviour

### 8.2. copyArgs

Name	FunctionHelper::copyArgs(args: void*, vargs: void**)
Visibility	
Parameters	args: void*, vargs: void**
Return value	void describe return value
behavior	describe beahviour

#### 8.3. FastCall

Name	<pre>FunctionHelper::FastCall(method: TCppMethod, args: void*, self: void*, result: void*)</pre>
Visibility	
Parameters	method: TCppMethod, args: void*, self: void*, result: void*
Return value	bool describe return value
behavior	describe beahviour

#### 8.4. CallV

Name	FunctionHelper::CallV(method: TCppMethod, self: TCppObject, args: void*)
Visibility	
Parameters	method: TCppMethod, self: TCppObject, args: void*
Return value	void describe return value
behavior	describe beahviour

#### 8.5. CallR

Name	<pre>FunctionHelper::CallR(method: TCppMethod, self: TCppObject, args: void*)</pre>
Visibility	
Parameters	method: TCppMethod, self: TCppObject, args: void*
Return value	void* describe return value
behavior	describe beahviour

#### 8.6. CallS

Name	FunctionHelper::CallS(method: TCppMethod, self: TCppObject, args: void*)
Visibility	
Parameters	method: TCppMethod, self: TCppObject, args: void*
Return value	Char* describe return value
behavior	describe beahviour

### 8.7. CallO

Name	<pre>FunctionHelper::CallO(method: TCppMethod, self: TCppObject, args: void*, resultype: TCppType)</pre>
Visibility	
Parameters	$method: \ TCppMethod, \ self: \ TCppObject, \ args: \ void*, \ resultype: \ TCppType$
Return value	TCppObject describe return value
behavior	describe beahviour

### 8.8. CallConstructor

Name	<pre>FunctionHelper::CallConstructor(method: TCppMethod, klass: TCppType, args: void*)</pre>
Visibility	
Parameters	method: TCppMethod, klass: TCppType, args: void*
Return value	TCppObject describe return value
behavior	describe beahviour

### 8.9. CallDestructor

Name	FunctionHelper::CallDestructor(type: TCppObject)	TCppType, self:
Visibility		
Parameters	type: TCppType, self: TCppObject	
Return value	void describe return value	
behavior	describe beahviour	

### 8.10. IsConstructor

Name	FunctionHelper::IsConstructor(method: TCppMethod)
Visibility	
Parameters	method: TCppMethod
Return value	bool describe return value
behavior	describe beahviour

### 8.11. IsPublicMethod

Name	FunctionHelper::IsPublicMethod(method: TCppMethod)
Visibility	
Parameters	$method:\ TCppMethod$
Return value	bool describe return value
behavior	describe beahviour

### 8.12. IsStaticMethod

Name	FunctionHelper::IsStaticMethod(method: TCppMethod)
Visibility	
Parameters	$method:\ TCppMethod$
Return value	bool describe return value
behavior	describe beahviour

### 8.13. IsConstMethod

Name	FunctionHelper::IsConstMethod(method: TCppMethod)
Visibility	
Parameters	method: TCppMethod
Return value	bool describe return value
behavior	describe beahviour

# $\bf 8.14. \ Is Method Template$

Name	FunctionHelper::IsMethodTemplate(method: TCppMethod)
Visibility	
Parameters	$method:\ TCppMethod$
Return value	bool describe return value
behavior	describe beahviour

# $\bf 8.15. \ Get Method Num Template Args$

Name	<pre>FunctionHelper::GetMethodNumTemplateArgs(scope: imeth: TCppIndex)</pre>	TCppScope,
Visibility		
Parameters	scope: TCppScope, imeth: TCppIndex	
Return value	TCppIndex describe return value	
behavior	describe beahviour	

# $\bf 8.16. \ Get Method Template Arg Name$

Name	<pre>FunctionHelper::GetMethodTemplateArgName(scope: TCppScope, imeth: TCppIndex, iarg: TCppIndex)</pre>		
Visibility			
Parameters	$scope:\ TCppScope,\ imeth:\ TCppIndex,\ iarg:\ TCppIndex$		
Return value	string describe return value		
behavior	describe beahviour		

### $8.17. \ \text{GetNumMethods}$

Name	FunctionHelper::GetNumMethods(scope: TCppScope)
Visibility	
Parameters	scope: TCppScope
Return value	TCppIndex describe return value
behavior	describe beahviour

### $8.18. \ GetMethodIndexAt$

Name	<pre>FunctionHelper::GetMethodIndexAt(scope: TCppIndex)</pre>	TCppScope, imeth:
Visibility		
Parameters	$scope:\ TCppScope,\ imeth:\ TCppIndex$	
Return value	TCppIndex describe return value	
behavior	describe beahviour	

### $\bf 8.19. \ Get Methods From Name$

Name	FunctionHelper::GetMethodsFromName(scope: TCppScope, name: string)
Visibility	
Parameters	scope: TCppScope, name: string
Return value	vector <tcppmethod> describe return value</tcppmethod>
behavior	describe beahviour

### 8.20. GetMethod

Name	FunctionHelper::GetMethod(scope:	TCppScope, imeth:	TCppIndex)
Visibility			
Parameters	scope: TCppScope, imeth: TCppIndex		
Return value	TCppMethod describe return value		
behavior	describe beahviour		

### $8.21. \ GetMethodName$

Name	FunctionHelper::GetMethodName(method: TCppMethod)
Visibility	
Parameters	method: TCppMethod
Return value	string describe return value
behavior	describe beahviour

# $\bf 8.22. \ Get Method Result Type$

Name	FunctionHelper::GetMethodResultType(method: TCppMethod)
Visibility	
Parameters	method: TCppMethod
Return value	string describe return value
behavior	describe beahviour

# $\bf 8.23. \ Get Method Num Args$

Name	FunctionHelper::GetMethodNumArgs(method: TCppMethod)
Visibility	
Parameters	$method:\ TCppMethod$
Return value	TCppIndex describe return value
behavior	describe beahviour

# $\bf 8.24. \ Get Method Req Args$

Name	FunctionHelper::GetMethodReqArgs(method: TCppMethod)
Visibility	
Parameters	method: TCppMethod
Return value	TCppIndex describe return value
behavior	describe beahviour

# $\bf 8.25. \ Get Method Arg Name$

Name	FunctionHelper::GetMethodArgName(method:	TCppMethod, iarg	: int)
Visibility			
Parameters	method: TCppMethod, iarg: int		
Return value	string describe return value		
behavior	describe beahviour		

# $\bf 8.26. \ Get Method Arg Type$

Name	FunctionHelper::GetMethodArgType(method:	TCppMethod, i	iarg:	int)
Visibility				
Parameters	method: TCppMethod, iarg: int			
Return value	string describe return value			
behavior	describe beahviour			

# $8.27. \ {\bf GetMethodArgDefault}$

Name	FunctionHelper::GetMethodArgDefault(method: int)	TCppMethod, iarg:
Visibility		
Parameters	method: TCppMethod, iarg: int	
Return value	string describe return value	
behavior	describe beahviour	

### $8.28. \ GetMethodSignature$

Name	FunctionHelper::GetMethodSignature(scope: TCppIndex)	TCppScope, imeth:
Visibility		
Parameters	scope: TCppScope, imeth: TCppIndex	
Return value	string describe return value	
behavior	describe beahviour	

# 9. ClassHelper

describe class ClassHelper here

# 9.1. IsNamespace

Name	ClassHelper::IsNamespace(scope: TCppScope)
Visibility	
Parameters	scope: TCppScope
Return value	bool describe return value
behavior	describe beahviour

#### 9.2. IsAbstract

Name	ClassHelper::IsAbstract(klass: TCppType)
Visibility	
Parameters	klass: TCppType
Return value	bool describe return value
behavior	describe beahviour

### 9.3. IsEnum

Name	ClassHelper::IsEnum(typename: string)
Visibility	
Parameters	typename: string
Return value	bool describe return value
behavior	describe beahviour

### 9.4. IsStruct

Name	ClassHelper::IsStruct(typename: string)
Visibility	
Parameters	typename: string
Return value	bool describe return value
behavior	describe beahviour

#### 9.5. GetFinalName

Name	ClassHelper::GetFinalName(klass: TCppType)
Visibility	
Parameters	klass: TCppType
Return value	string describe return value
behavior	describe beahviour

# $9.6. \ {\bf GetScopedFinalName}$

Name	ClassHelper::GetScopedFinalName(klass: TCppType)
Visibility	
Parameters	klass: TCppType
Return value	string describe return value
behavior	describe beahviour

### 9.7. GetNumBases

Name	ClassHelper::GetNumBases(klass: TCppType)
Visibility	
Parameters	klass: TCppType
Return value	TCppIndex describe return value
behavior	describe beahviour

#### 9.8. GetBaseName

Name	ClassHelper::GetBaseName(klass:	TCppType, ibase:	TCppIndex)
Visibility			
Parameters	klass: TCppType, ibase: TCppIndex		
Return value	string describe return value		
behavior	describe beahviour		

# 9.9. IsSubtype

Name	ClassHelper::IsSubtype(derived:	TCppType, base:	ТСррТуре)
Visibility			
Parameters	derived: TCppType, base: TCppType		
Return value	bool describe return value		
behavior	describe beahviour		

### 9.10.~GetNumDatamembers

Name	ClassHelper::GetNumDatamembers(scope: TCppScope)
Visibility	
Parameters	scope: TCppScope
Return value	TCppIndex describe return value
behavior	describe beahviour

### $9.11.~{ m GetDatamemberName}$

Name	ClassHelper::GetDatamemberName(scope: TCppScope, idata: TCppIndex)
Visibility	
Parameters	$scope:\ TCppScope,\ idata:\ TCppIndex$
Return value	string describe return value
behavior	describe beahviour

# $9.12. \ {\bf GetDatamemberType}$

Name	ClassHelper::GetDatamemberType(scope: TCppScope, idata: TCppIndex)
Visibility	
Parameters	scope: TCppScope, idata: TCppIndex
Return value	string describe return value
behavior	describe beahviour

### $9.13.~{ m GetDatamemberOffset}$

Name	ClassHelper::GetDatamemberOffset(scope: TCppIndex)	TCppScope, idata:
Visibility		
Parameters	$scope:\ TCppScope,\ idata:\ TCppIndex$	
Return value	ptrdiff describe return value	
behavior	describe beahviour	

### 9.14. GetDatamemberIndex

Name	ClassHelper::GetDatamemberIndex(scope:	TCppScope, name:	string)
Visibility			
Parameters	scope: TCppScope, name: string		
Return value	TCppIndex describe return value		
behavior	describe beahviour		

### 9.15. IsPublicData

Name	ClassHelper::IsPublicData(scope:	TCppScope, idata:	TCppIndex)
Visibility			
Parameters	scope: TCppScope, idata: TCppIndex		
Return value	bool describe return value		
behavior	describe beahviour		

### 9.16. IsStaticData

Name	ClassHelper::IsStaticData(scope:	TCppScope, idata:	TCppIndex)
Visibility			
Parameters	scope: TCppScope, idata: TCppIndex		
Return value	bool describe return value		
behavior	describe beahviour		

### 9.17. IsConstData

Name	ClassHelper::IsConstData(scope:	TCppScope, idata:	TCppIndex)
Visibility			
Parameters	$scope:\ TCppScope,\ idata:\ TCppIndex$		
Return value	bool describe return value		
behavior	describe beahviour		

### 9.18. IsEnumData

Name	ClassHelper::IsEnumData(scope: TCppScope, idata: TCppIndex)
Visibility	
Parameters	scope: TCppScope, idata: TCppIndex
Return value	bool describe return value
behavior	describe beahviour

### 9.19. resolve Address

Name	<pre>ClassHelper::resolveAddress(staticMember: TClassRef)</pre>	TDataMember, clazz:
Visibility		
Parameters	$static Member:\ TD at a Member,\ clazz:\ TC lass Ref$	
Return value	void* describe return value	
behavior	describe beahviour	

### 9.20. resolve Address

Name	ClassHelper::resolveAddress(staticMember: TClassRef)	TDataMember, clazz:
Visibility		
Parameters	$static Member:\ TD at a Member,\ clazz:\ TC lass Ref$	
Return value	void* describe return value	
behavior	describe beahviour
